

PROFESSIONAL SUMMARY

Software Engineer and proven team leader with a track record of directing teams from 8 to 30+ people across software engineering, field operations, and business operations. Hands-on experience designing, building, and validating full-stack applications, including applying AI-assisted development workflows to refine requirements, structure feature behavior, and generate and validate test cases. Independently identifies and automates manual business workflows using Python, most recently building an end-to-end statement-processing pipeline from the ground up. Combines technical capability with real-world people leadership: training, supervising, and driving performance in high-accountability, fast-paced environments.

TECHNICAL SKILLS

Languages: Python, Java, C#, JavaScript, TypeScript, SQL
Frameworks & Tools: React, Redux, Node.js, Tailwind, PostgreSQL, Supabase, REST APIs, QuickBooks Online API, Zoho Mail API, Git, GitHub Actions (CI/CD)
Practices: Agile/Scrum, AI-Assisted Development (prompt engineering, requirements refinement, automated test generation), Process Automation, Peer Code Review, Team Leadership & Training, Cross-Team Collaboration

EDUCATION

Bachelor of Science, Computer Science — July 2025
Brigham Young University–Idaho, Rexburg, ID | 4.0 GPA, Academic Scholarship | Web Frontend Certificate

RELEVANT EXPERIENCE

Data Operations & Process Automation | *Bedrock Investment Property, Bowling Green, KY (Remote)* Jun 2026 – Present

- Identified a fully manual, error-prone workflow for processing property owner statements and led the initiative to automate it end-to-end.
- Architecting a Python automation pipeline that parses PDF owner statements and extracts transaction data as the foundation for a fully automated financial workflow.
- Designing a QuickBooks Online integration to post transaction entries automatically, targeting a key manual bottleneck in the statement-processing cycle.
- Support day-to-day data entry and financial record processing for property management operations across QuickBooks Online and Zoho.

Project: Owner Statement Automation Pipeline — Python pipeline automating PDF → QuickBooks → owner-email workflow; built and tested against sample data.

Software Engineer (Project Lead) | *BYU-I Rec Services, Rexburg, ID (Remote)* Sept 2024 – Jul 2025

- Led a 30+ member development team from the ground up, directing the design and build of a full-stack scheduling and time-tracking system (React, PostgreSQL, Supabase) that replaced a commercial SaaS platform.
- Applied AI-assisted workflows to refine product requirements into structured, testable specifications, defining expected behavior and edge cases before implementation.
- Designed and implemented API-driven features, including authentication, shift management, and data persistence, while using AI to generate test cases and simulate edge conditions to validate system behavior.
- Verified system correctness through manual testing and CI/CD pipelines (GitHub Actions), achieving 95% on-time feature delivery and a 20% improvement in deployment efficiency.
- Peer-reviewed code across frontend, backend, and database teams and partnered with stakeholders to scope MVP requirements, improving delivery efficiency by 15%.

Project: trauma.repair — online community platform supporting abuse survivors (React, Tailwind, Supabase, PostgreSQL, Cloudflare, GitHub CI/CD).

LEADERSHIP EXPERIENCE

Assistant Office Manager | *Vivint Smart Home, St. Louis, MO* 2022 – 2023, 2025 – Jun 2026

- Led and coached a team of 8+ installation technicians to 1,000+ completed accounts in five months, consistently exceeding company KPIs.
- Designed and rolled out targeted training programs that boosted technician performance and raised customer satisfaction scores by 12%.
- Owned \$3M in weekly inventory shipments, streamlining processes and cutting handling inefficiencies.
- Drove a 20% increase in team job-completion speed through process improvements and hands-on, collaborative leadership.

Alarm System Installation Technician | *Vivint Smart Home, Multi-State (6+)* 2020 – 2022, 2025 – Jun 2026

- Maintain certifications across 6+ states to independently perform alarm, smoke, and fire-safety system installations at 100+ residential and commercial locations.
- Trained and supervised 10+ employees, delivering both classroom instruction and hands-on, in-field coaching.
- Consistently exceed performance targets, driving 5%+ revenue growth through upselling and strong, lasting customer relationships.
